

Newborough Warren Weather & Water Watch: June 2026

Weather Summary

Metric	Local Gauge (ILLANF24)	RAF Valley	Typical June*
Total Rainfall	140.2 mm	58.0 mm	~57.1 mm
Average Highs		19.8 C	17.2 C
Average Lows		13.2 C	11.0 C

**Based on 1991-2020 Met Office climate averages (RAF Valley).*

June saw 58.0 mm at RAF Valley, close to the 57.1 mm average (101%). Temperatures were milder than usual with lows of 13.2 C (average 11.0 C).

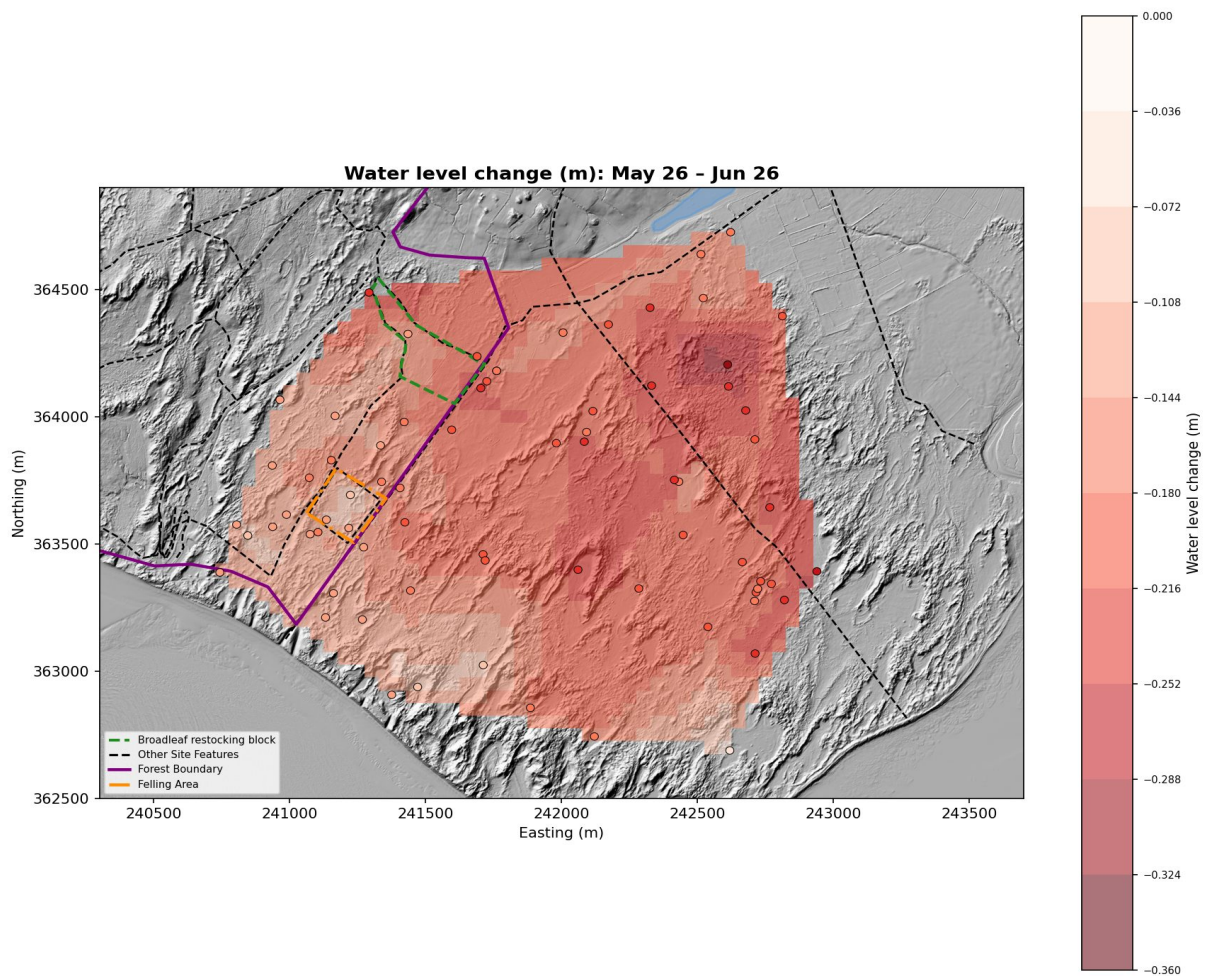

At the local gauge, rain fell on 12 of 30 days (18 dry days under 1 mm). The wettest day was 7 June (31.5 mm). The first half of the month brought 114 mm and the second half 26 mm. The longest dry spell ran 7 days.

The hydrological year cumulative rainfall (October to June) stands at 739 mm, which is 113% of the average (655 mm).

Local Water Levels

The latest well round on 01/07/2026 covered 73 monitoring dipwells across the reserve. Water levels are predominantly falling: 73 wells showed decreases, 0 showed increases, and 0 were stable. The mean change was -0.18 m.

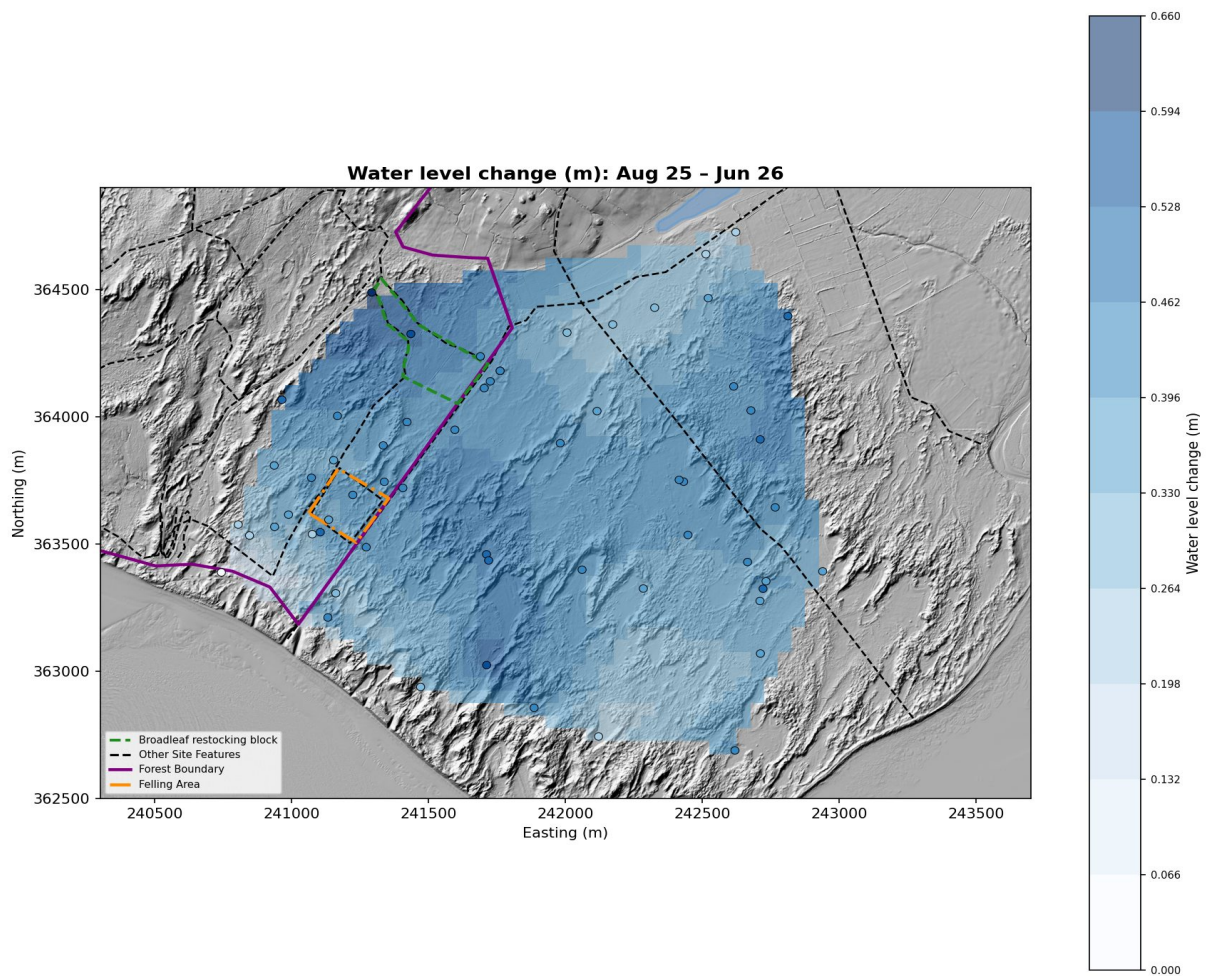

Month-on-Month Change: May 2026 to Jun 2026

Water level change (m) from May 2026 to Jun 2026. Blue = rising, red = falling.

Rebound from Summer Low: Aug 2025 to Jun 2026

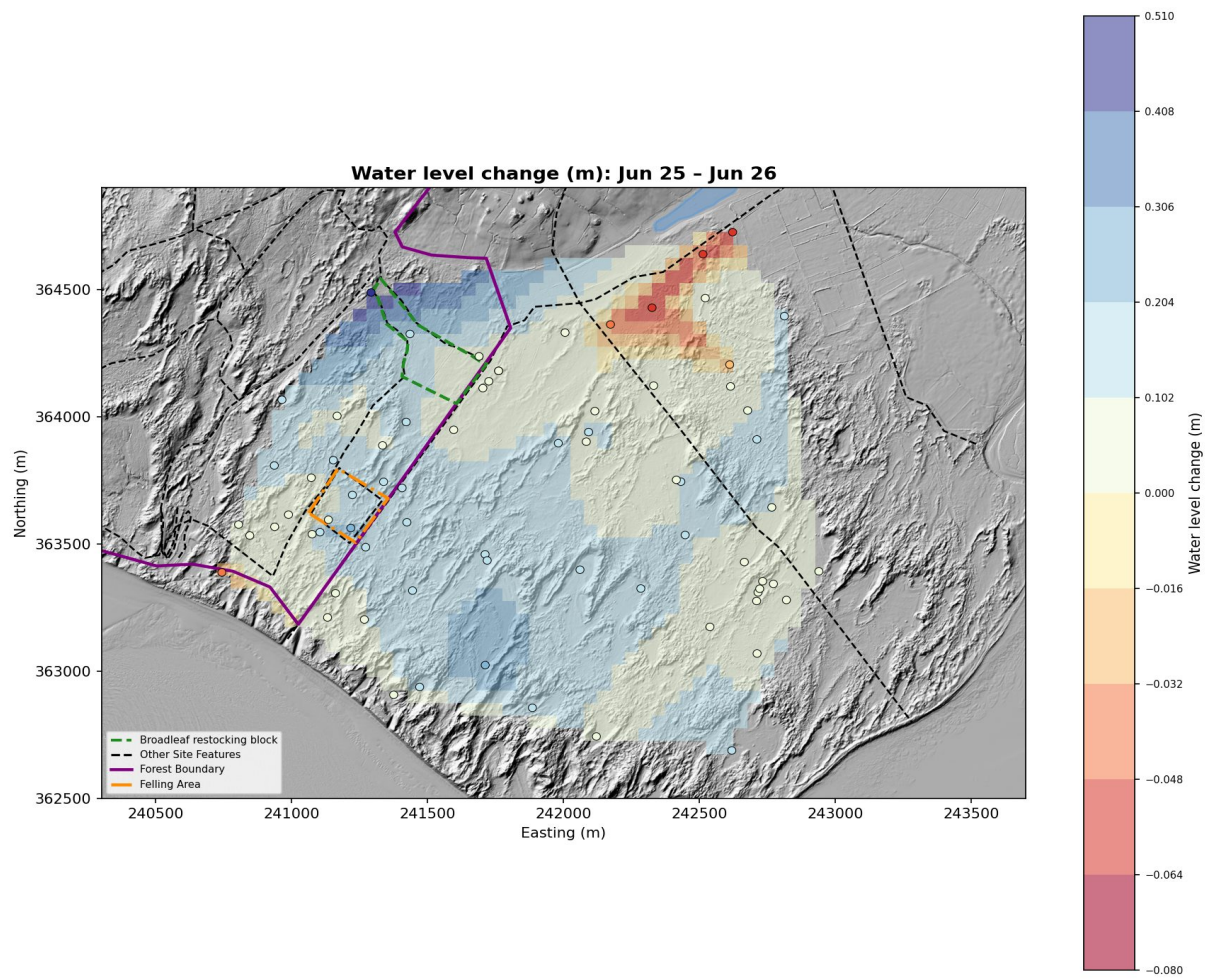

Since the summer low in August 2025, water levels have risen by an average of +0.39 m across 60 wells, with a maximum rise of +0.61 m.

Cumulative water level change since Aug 2025.

Year-on-Year Comparison: Jun 2025 vs Jun 2026

Compared to this time last year, 65 out of 73 wells are showing higher water levels, with a mean change of +0.09 m (range -0.06 to +0.49 m).

Year-on-year water level change from Jun 2025 to Jun 2026.

Well Measurement Summary

Largest Risers and Fallers (month-on-month)

Well	Change (m)	Well	Change (m)
ceh11	-0.06	D5	-0.24
ceh19	-0.08	D8	-0.25
FE4	-0.08	D38	-0.25
ceh21	-0.09	ceh24	-0.26
nw5	-0.10	D7	-0.31

Full data: 73 wells. Mean: -0.18 m. Range: -0.31 to -0.06 m.
