

Newborough Warren Weather & Water Watch: September 2026

Weather Summary

Metric	Local Gauge (IBODOR6)	RAF Valley	Typical September*
Total Rainfall	52.6 mm	53.8 mm	~73.9 mm
Average Highs		18.6 C	17.3 C
Average Lows		13.5 C	11.6 C

**Based on 1991-2020 Met Office climate averages (RAF Valley).*

September was drier than average, with 53.8 mm at RAF Valley (73% of the 73.9 mm average). Temperatures were milder than usual with lows of 13.5 C (average 11.6 C).

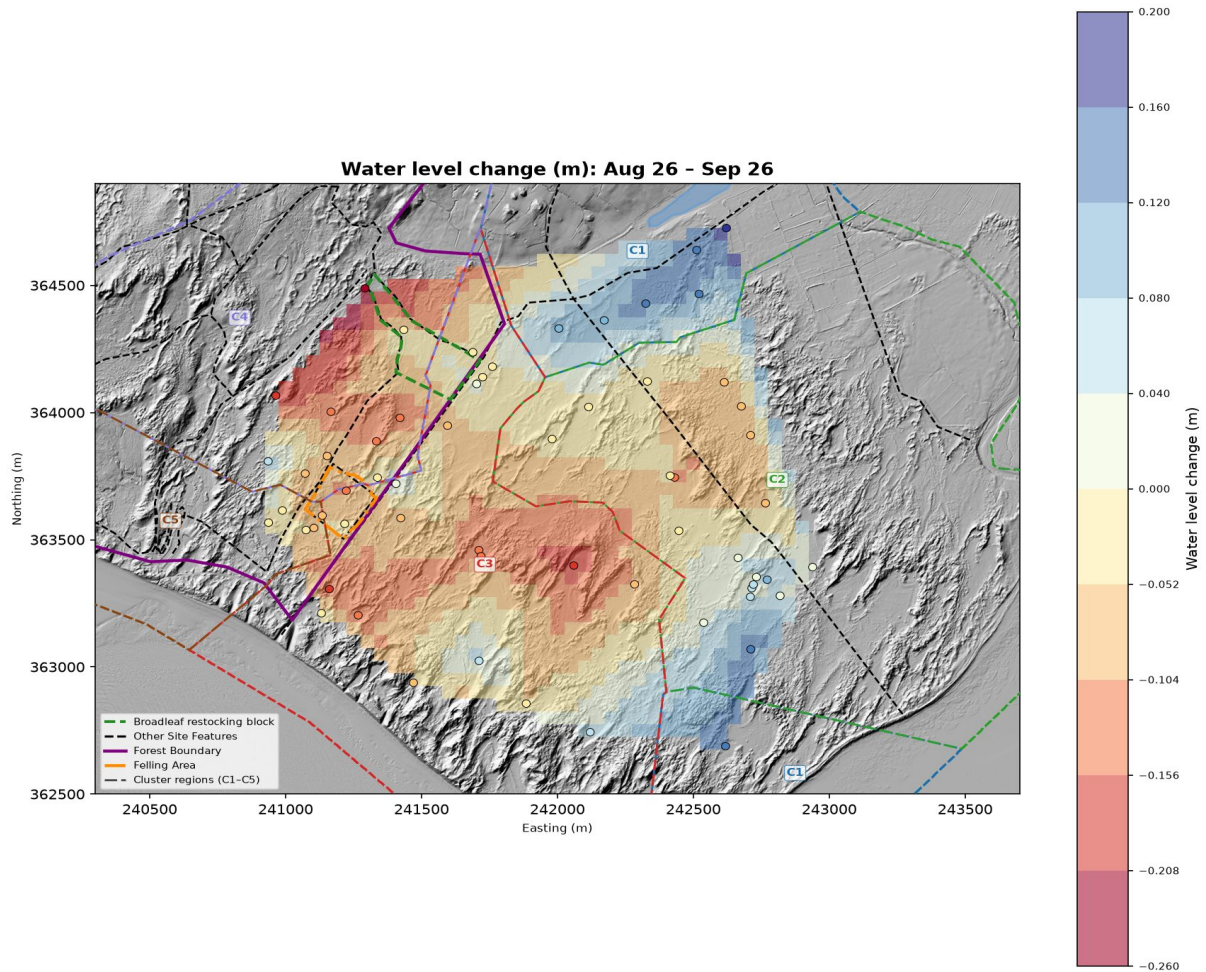

At the IBODOR6 gauge, rain fell on 7 of 30 days (23 dry days under 1 mm). The wettest day was 3 September (21.1 mm). The first half of the month brought 51 mm and the second half 2 mm. The longest dry spell ran 12 days.

The hydrological year cumulative rainfall (October to September) stands at 836 mm, which is 98% of the average (856 mm).

Local Water Levels

The latest well round on 04/10/2026 covered 69 monitoring dipwells across the reserve. Water levels are predominantly falling: 37 wells showed decreases, 20 showed increases, and 12 were stable. The mean change was -0.02 m.

Month-on-Month Change: Aug 2026 to Sep 2026

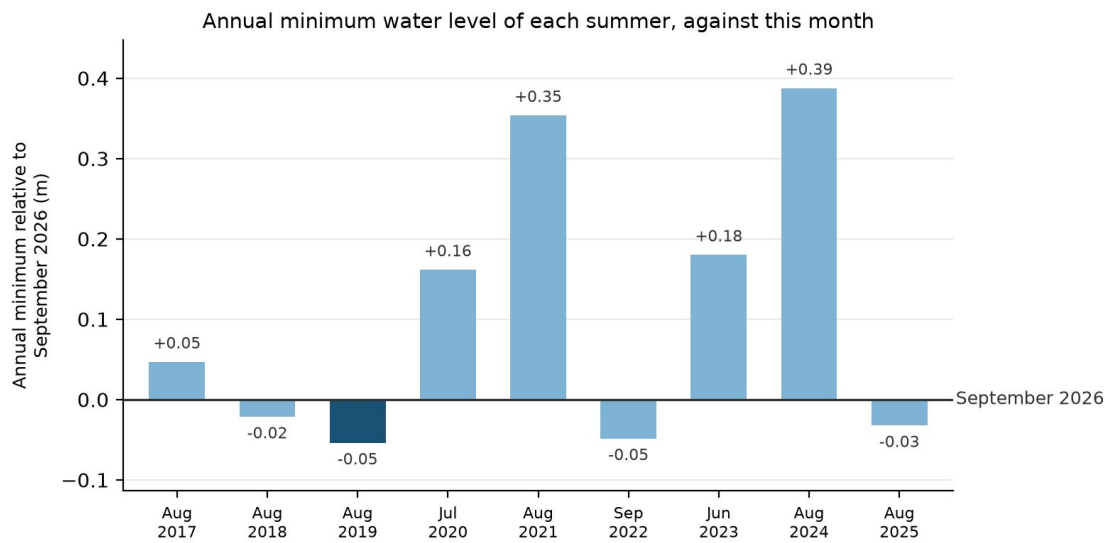

Water level change (m) from Aug 2026 to Sep 2026. Blue = rising, red = falling.

Annual Minimum

This round is the lowest of the year so far: averaged over the 73 wells read in every round since April, September's level is below every earlier month, so water levels have not yet begun their annual recovery. Last year's minimum came in August 2025; across 59 wells this month's level is 0.03 m higher than it.

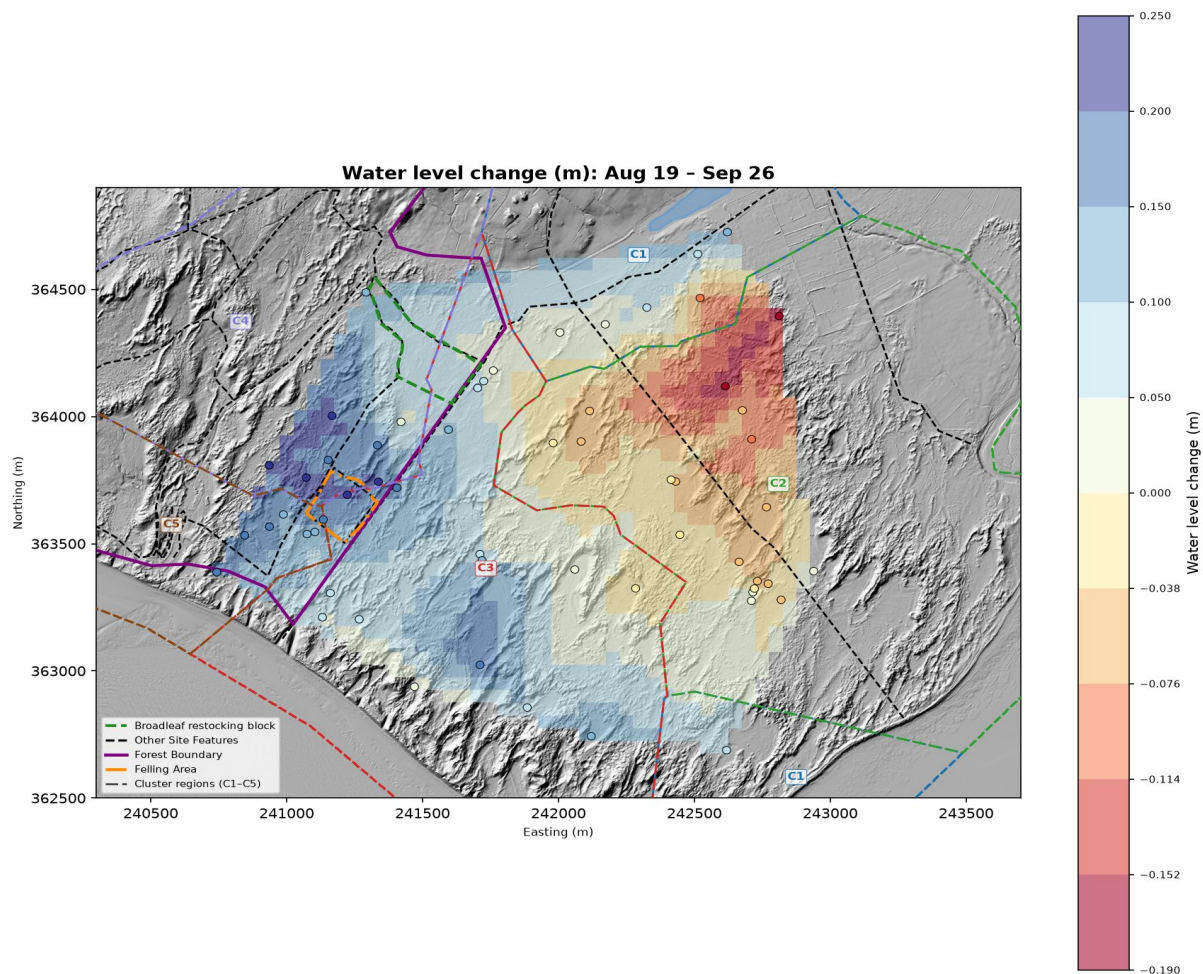

Against the last 9 years: the lowest annual minimum of the period was August 2019. September's level is 0.05 m above it (across 61 wells read on both occasions), and lower than 5 of the 9 annual minima.

Annual Minima of Previous Years

Each bar compares only wells read in both rounds (well by well); below the line = that year's low was lower than now.
Each summer's annual minimum relative to September 2026, compared well by well. Below the line, that year's low was lower than this month; the darker bar is the lowest of the period.

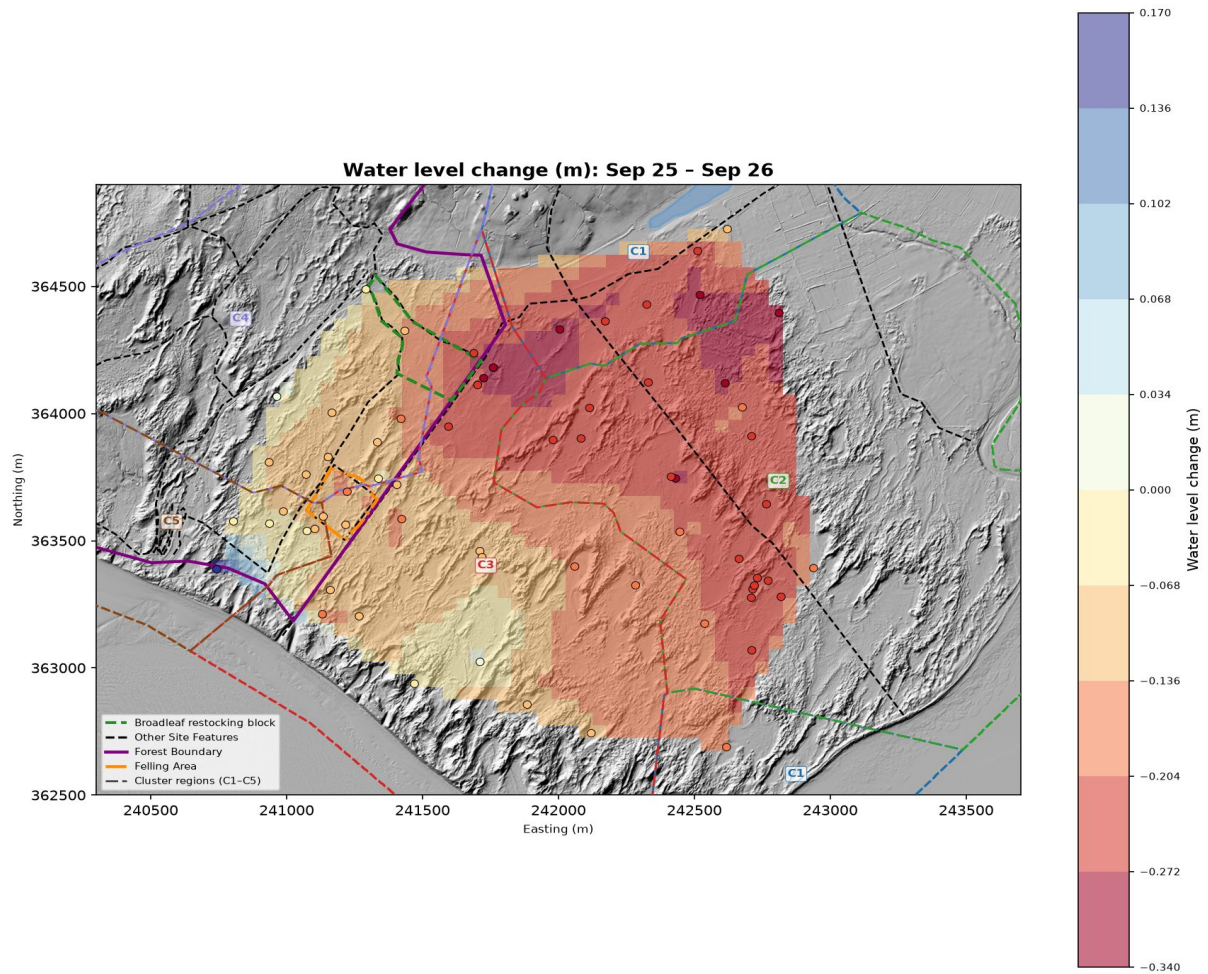

Difference from the Lowest Minimum: Aug 2019 to Sep 2026

Water level change (m) from Aug 2019, the lowest annual minimum of the period, to September 2026. Blue = higher now, red = lower now.

Year-on-Year Comparison: Sep 2025 vs Sep 2026

Compared to this time last year, 1 out of 68 wells are showing higher water levels, with a mean change of -0.17 m (range -0.32 to +0.15 m).

Year-on-year water level change from Sep 2025 to Sep 2026.

Well Measurement Summary

Largest Risers and Fallers (month-on-month)

Well	Change (m)	Well	Change (m)
ceh6	+0.18	ceh2	-0.15
ceh11	+0.15	ceh36	-0.16
D38	+0.15	ceh13	-0.17
ceh23	+0.14	ceh40	-0.18
ceh25	+0.14	ceh14	-0.24

Full data: 69 wells. Mean: -0.02 m. Range: -0.24 to +0.18 m.
